COMPOSITION
Contains 10% w/v Povidone-Iodine USP.

PROPERTIES
Betasept has the broad microbicidal spectrum of iodine, but is free of the undesirable features and disadvantages associated with elemental iodine. It is lethal to gram-positive and gram-negative bacteria, fungi, protozoa, spores and viruses. It is active against antibiotic-resistant micro-organisms. No resistance to Betasept has been observed. It has an immediate onset and prolonged duration of action. Blood, pus, soap does not affect the activity of Betasept vaginal douche.

Betasept is a vaginal cleanser with a broad spectrum of activity. It rapidly eliminates all vaginal pathogens, drastically reduces the risk of infection and prevents recurrence of symptoms.

BETASEPT vaginal douche has a low surface tension allowing penetration even into small vaginal crypts. It is non-irritating to the vaginal mucosa.

INDICATIONS
For unspecific vaginitis, mixed vaginal infections, candidal vaginitis, trichomonal vaginitis or preoperative preparation of the vagina.

CONTRAINDICATIONS
Should not be used in case of known iodine sensitivity.

DIRECTIONS FOR USE
For the treatment of vaginitis:
Once a day for 14 days, throughout the menstrual cycle two table spoons full (30 ml) added to a liter of luke warm water and douche, using an appropriate vaginal applicator, before bedtime.
If further therapy is required, douching should be continued the next two cycles. It may be recommendable for the patient to return for physician visit following 2 weeks of therapy.

For routine vaginal douching:
Two table spoons full (30 ml) added to a liter of luke warm water and douche, using an appropriate vaginal applicator once or twice a week.

PRECAUTIONS
In case of swelling or irritation use should be discontinued and the physician consulted. Use under medical supervision in pregnant women and newborns.

STORAGE
Keep at room temperature below 30°C. Protect from tight. Close the container tightly after use.
