Hexamidine, chlorhexidine, chlorocresol
Antiseptic foaming solution
For external use

COMPOSITION
Chlorhexidine digluconate (20 % solution) 0.50 ml
Hexamidine di-isethionate ...0.10 g
Chlorocresol .........................0.30 g
Excipient (pH5)..................ad 100 ml

ANTIBACTERIAL - ANTIFUNGAL
USES AND ADMINISTRATION:
Gynecology: Disinfection of skin and mucosa (vulvitis, vaginitis).
Use without dilution and rinse or diluted to 1/10th for vaginal douche. Dermatology: Supportive treatment for primary bacterial skin diseases (acne, intertrigos, cutaneous mycosis). Use either without dilution, wash then rinse thoroughly, or diluted to 1/10th. Surgery: Disinfection of wounds use diluted to 1/10th. Disinfection of hands: use without dilution and rinse thoroughly. Cytéal should not be used to disinfect surgical instruments.

CONTRAINDICATIONS:
Known hypersensitivity to any of the components. Keep away from the eyes and do not use in the ear if tympanic perforation is suspected.

ADVERSE EFFECTS:
Hypersensitivity reactions may occur.

PRECAUTIONS:
Use with caution in premature babies or infants and on broken skin (burns, open wounds). Rinse thoroughly after the application of Cytéal, specially if used without dilution. The simultaneous or consecutive use of other antiseptics or ordinary soap should be avoided as it may lead to loss of efficacy. Store away from light and at a temperature below 25°C. Close tightly the bottle after use. Do not swallow.
